DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 8, 17, and 33 are allowed, subject to an examiner's amendment described below.

Examiner's Amendment

2. An examiner's amendment to the record is attached to this Office action. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
3. Authorization for this examiner's amendment was given in a telephone interview with Rickard K. Demille (Registration #58471) on November 4, 2009.

Reasons for Allowance

4. The following is the examiner's statement of reasons for allowance:
5. The closest prior art that the examiner has been able to locate are Grey ("An analytic approach for quantifying the value of e-business initiatives, cited in prior Office action) and Brown (US PG-PUB 2005/0010469, cited in prior Office action).
6. The prior art references relate generally to the concepts of consulting assessment using value chain steps and performance attributes, but none of the prior art references disclose the specific approach of evaluating portfolio management claimed by Applicant.

7. Grey discloses a systematic method for diagnosing problems in the value chain and for selecting and prioritizing e-business initiatives. The reference discloses a "Value Chain Modeling Tool" that is equipped to evaluate scenarios involving risks and uncertainties in the customer's business environment. The tool does not disclose evaluating portfolio management nor does it disclose groups of questions organized within each value chain step and wherein some of said questions are directed to performance attributes and are interspersed across said groups of questions.

8. Brown discloses a method for providing a consulting assessment environment wherein data entry specifications such as assessment questions, desired state descriptions, weight factors, benefit and risk descriptions are collected and stored in data templates. While Brown relates generally to the use of assessment questions and weight factors, Brown does not disclose applying the use of such techniques in a value chain analysis, let alone in the specific manner claimed by applicant. For example, Brown does not disclose groups of questions organized within each value chain step and wherein some of said questions are directed to performance attributes and are interspersed across said groups of questions. Also, Brown, like Grey, does not disclose evaluating portfolio management processes.

9. The following is a formal statement of reasons for allowance:

10. Claims 1 and 17 are allowed because the best prior art of record, Grey and Brown, alone or in combination, neither discloses nor fairly suggests the limitations, in a computer-based method and associated storage medium with instructions encoded thereon, for evaluating portfolio management, comprising:

interviewing a portfolio management industry expert thereby collecting:

- A) a weighting determined by said industry expert for each of a plurality of evaluation categories before asking evaluation questions associated with said evaluation categories, wherein said evaluation categories comprise categories of value chain steps and performance attributes, and
- B) responses from said industry expert to said evaluation questions, wherein said evaluation questions comprise groups of questions organized within each of said value chain steps and wherein some of said evaluation questions within said value chain steps are directed to said performance attributes and are interspersed across said groups of questions;

inputting said weightings and said responses into a computer analysis tool;

analyzing said responses to said evaluation questions in response to said weightings of said evaluation categories using said computer analysis tool for each of said value chain steps and said performance attributes;

generating a computer generated analysis comprising:

a value chain analysis for each of said value chain steps comparing an aggregate response value corresponding to said responses to said evaluation questions within each value chain step to the weighting associated with each value chain step that is determined by said industry expert; and

a performance attribute analysis separate from the value chain analysis that is generated for each of said performance attributes comparing an aggregate response value corresponding to said responses to said evaluation questions that are interspersed across said groups of questions to the weighting associated with each performance attribute that is determined by said industry expert, said interspersed evaluation questions thereby being included in both said value chain analyses and said performance attribute analyses; and

reporting said computer generated analysis to said industry expert contemporaneously with an interview of said industry expert that comprises said interviewing step, said inputting step and said analyzing step, wherein immediate results are provided to said industry expert and wherein scenarios of said weightings and said responses are immediately comparable.

11. Claims 8 and 33 are allowed by virtue of their dependence on one of the above allowed claims.
